A slow-moving cold front entered Arkansas, colliding with low-level Gulf moisture that was greater-than-normal for September, as well as some middle and upper level atmospheric moisture from the remains of Pacific Hurricane Henriette. The result was periodic heavy rain and flash flooding from the 7th through the 10th. A cold front moving through the state finally pushed the moisture south of Arkansas on the night of the 10th and the morning of the 11th.
